		Mid-Term Test	Continuous Assessment				
NECPC 31	Digital VLSI (Theory)	20	20	60	---	---	100

Course Prerequisite: Digital System Design (NECPC32),
Electronic Devices and Circuits (NECPC41)

Course Objectives:

- 1 To understand VLSI Design flow and technology trends.
- 2 To realise MOS based circuits using different design styles.
- 3 To explore static and dynamic CMOS logic styles.
- 4 To design and implement complex Boolean functions and sequential circuits.
- 5 To study and analyze different memory circuits.
- 6 To understand and design high-performance arithmetic units.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Explain VLSI design methodologies and semiconductor fabrication processes.
- 2 Analyze the static and dynamic behavior of NMOS and CMOS inverters.
- 3 Design CMOS logic gates using various design styles.
- 4 Realize combinational and sequential logic functions.
- 5 Demonstrate understanding of memory architectures and their working principles
- 6 Design and evaluate high-speed arithmetic circuits.

Department of Electronics and Computer Science

DIGITAL VLSI (THEORY)

Module	Contents	Hrs
1	VLSI Design flow and Technology Trends	05
1.1	VLSI Design Flow: Full custom and Semicustom IC design flow.	
1.2	Semiconductor Manufacturing: Semiconductor technology trend, clean rooms, Fabrication flowchart for steps in IC fabrication.	
1.3	Scaling: Types of scaling, comparison of MOSFET Model levels.	
1.4	Technology Comparison: Comparison of BJT and MOS technologies, long channel and short channel MOS devices.	
2	MOSFET Inverters	08
2.1	Introduction to MOS inverters: Active and passive load nMOS inverters, CMOS inverter and their comparison.	
2.2	Circuit Analysis of MOS Inverters Static Analysis of Resistive nMOS and CMOS Inverters: Calculation of critical voltages and noise margins.	
2.3	Design of symmetric CMOS inverter.	
2.4	Analysis of CMOS inverter: Calculation of rise time, fall time and propagation delay.	
3	MOS Circuit Design Styles	07
3.1	Static CMOS.	
3.2	Pseudo NMOS design styles.	
3.3	Pass transistor, Transmission gate.	
3.4	Dynamic: C ² MOS.	
3.5	Layout of CMOS Inverter, CMOS NAND, CMOS NOR.	
4	Combinational and Sequential Circuit Realization	07
4.1	Analysis and design of 2-I/P NAND, 2-I/P NOR and complex Boolean function realization using equivalent CMOS inverter for simultaneous switching, Complex Boolean function realization using various design styles and Basic gates and MUX realization using pass transistor and transmission gate logic.	
4.2	SR Latch, JK FF, D FF using CMOS logic.	
5	Semiconductor Memories	05
5.1	SRAM: 6T SRAM operation, design strategy, read/write circuits, sense amplifier.	
5.2	DRAM: 1T1R, operation modes, leakage currents, refresh operation, physical design.	
6	Data Path Design	07

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

6.1	Adder: CLA adder, MODL, Manchester carry chain, High-speed adders: carry skip, carry select and carry save.	
6.2	Multipliers and shifter: Array multiplier and barrel shifter.	
Total		39
Textbooks:		
1	CMOS Digital Integrated Circuits Analysis and Design, Sung-Mo Kang and Yusuf Leblebici, Tata McGraw Hill, Revised 4th Edition.	
2	Introduction to VLSI Circuits and Systems, John P. Uyemura, Wiley India Pvt. Ltd.	
3	Sorab K. Gandhi, "VLSI Fabrication Principles", Wiley, Student Edition.	
Reference books:		
1	Digital Integrated Circuits: A Design Perspective, Jan M. Rabaey, Anantha Chandrakasan, Borivoje Nikolic, Pearson Education, 2nd Edition.	
2	Basic VLSI Design, Douglas A Pucknell, Kamran Eshraghian, Prentice Hall of India Private Ltd.	
3	Logical Effort: Designing Fast CMOS Circuits, Ivan Sutherland and Bob Sproull	
4	Basics of CMOS Cell Design, Etienne Sicard and Sonia Delmas Bendhia, Tata McGraw Hill	
5	CMOS VLSI Design: A Circuits and Systems Perspective, Neil H. E. Weste, David Harris and Ayan Banerjee, Pearson Education	
6	Analysis and Design of Digital Integrated Circuits, David Hodges, Horace Jackson, Resve Saleh, McGraw-Hill, Inc.	
7	Advanced Semiconductor Memories: Architectures, Designs, and Applications, Ashok K. Sharma, Wiley Publication	

Internal Assessment:	
1	Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks.
2	Mid Term test is to be conducted when approx. 50% syllabus is completed.
3	Duration of the midterm test shall be one hour.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Continuous Assessment:

Continuous Assessment is of **20 marks**. The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following:

Sr. No	Rubrics	Marks
1	Certificate course for 4 weeks or more: NPTEL/ Coursera/ Udemy/any MOOC	10 marks
2	Wins in the event/competition/hackathon pertaining to the course.	10 marks
3	Content beyond syllabus presentation	10 marks
4	Creating Proof of concept	10 marks
5	Mini Project / Extra Experiments/ Virtual Lab	10 marks
6	GATE Based Assignment test/Tutorials etc	10 marks
7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

End Semester Theory Examination:

1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

Department of Electronics and Computer Science

DIGITAL VLSI (LAB)

Course Code	Course Name	Teaching Scheme (Teaching Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut	Total
NECPCL 51	Digital VLSI Lab	---	02	---	---	01	---	01

Course Code	Course Name	Examination Scheme					
		Theory			Term Work	Practical & Oral	Total
		Internal Assessment		End Sem Exam			
		Mid-Term Test	Continuous Assessment				
NECPCL 51	Digital VLSI Lab	---	---	---	25	25	50

Lab Objectives:

- 1 To understand and analyze the transfer and output characteristics.
- 2 To design and simulate CMOS inverters and logic gates.
- 3 To perform comparative analysis of NMOS inverters.
- 4 To implement combinational and sequential digital circuits.
- 5 To explore SRAM cell operation and stability.
- 6 To develop and simulate CMOS layouts.

Lab Outcomes:

After successful completion of the lab course students will be able to:

- 1 Plot and interpret the transfer and output characteristics of NMOS and PMOS devices.
- 2 Design and simulate CMOS inverters and evaluate parameters.
- 3 Implement and analyze complex logic functions.
- 4 Model and simulate arithmetic circuits.
- 5 Design and analyze 6T SRAM cell operation.
- 6 Create, simulate, and extract CMOS layouts.

VIVEKANAND EDUCATION SOCIETY'S

Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	Plot Transfer and output characteristics of NMOS and PMOS
2	Design CMOS inverter. Carry out static as well as transient simulation with different aspect ratio of pull up and pull-down devices
3	Comparative analysis of the NMOS Inverter with different types of loads.
4	Find the equivalent CMOS inverter for the given 2-input NAND and NOR gates
5	Implement the given equation using various logic design style
6	Implementation of any Flip- Flop using various logic design styles
7	Simulate Minimum Sized CMOS INVERTER circuit to calculate τ_{PHL} and τ_{PLH}
8	Design and Simulate 4:1 multiplexer using NMOS pass transistor
9	Design and simulate 4-bit adder/subtractor
10	Design CMOS transmission gate and perform all the analysis to verify its Characteristics.
11	Design and Simulate 4-bit multiplier
12	Simulate and carry out comparative analysis for 6T SRAM cell with a) $\beta = 1.5$ and $\alpha = 1$, and b) $\beta = 1$ and $\alpha = 1$
13	Draw the CMOS schematic and Layout of the inverter circuit, simulate layout
14	Extraction of CMOS layout and simulation of the extracted Inverter
15	Draw and simulate layout for CMOS NAND and CMOS NOR gate

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Term-Work:	
1	Term work should consist of 10 experiments.
2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	Total 25 Marks (Experiments: 15-marks, Term work Assessment: 10-marks)

		Theory			Term Work	Practical & Oral	Total
		Internal Assessment		End Sem Exam			
		Mid-Term Test	Continuous Assessment				
NECPC 52	Digital Signal Processing (Theory)	20	20	60	---	---	100

Course Objectives:

- 1 To make conversant with the fundamentals of digital signal processing
- 2 To familiarise with the transforms used in Digital Signal Processing
- 3 To familiarise with the design techniques and performance analysis of digital filters
- 4 To introduce digital signal processors and applications

Course Outcomes: After successful completion of the course students will be able to:

- 1 Apply the concept of DT Signal and DT Systems.
- 2 Classify and analyse discrete time signals and systems
- 3 Implement Digital Signal Transform techniques DTFT, DFT and FFT.
- 4 Design IIR digital filters to meet arbitrary specifications and Develop algorithms for implementation
- 5 Design FIR digital filters to meet arbitrary specifications and Develop algorithms for implementation
- 6 Understand different signal processing applications using DSP processors.

DIGITAL SIGNAL PROCESSING (THEORY)

Module	Contents	Hrs
1	Discrete-Time Signal and Discrete-Time Systems	05
1.1	Introduction to Digital Signal Processing, Sampling and Reconstruction, Standard DT Signals, Concept of Digital Frequency, Representation of DT signal using Standard DT Signals, Signal Manipulations-shifting, reversal, scaling, addition, multiplication.	
1.2	Classification of Discrete-Time Signals, Classification of Discrete-Systems, LTI system, Impulse Response, Step Response, linear convolution, Correlation.	
2	Frequency Domain Analysis using DTFT and Z Transform	07
2.1	Introduction to DTFT.	
2.2	Z transform - definition transform of standard signals, ROC, poles and zeros of transfer function, Inverse Z transform.	
2.3	Analysis and characterization of LTI system using Z transform, impulse and step response, causality, stability, stability of causal system.	
3	Discrete Fourier Transform and Fast Fourier Transform	07
3.1	Introduction to DFT and IDFT.	
3.2	Properties of DFT, circular convolution of sequences using DFT	
3.3	Fast Fourier transforms (FFT), Radix-2 decimation in time and decimation in frequency FFT algorithms, inverse FFT.	
4	IIR Digital Filters	07
4.1	Comparison of IIR and FIR filters, Types of IIR Filters.	
4.2	Mapping of S-plane to Z-plane, impulse invariance method, bilinear transformation method, Design of IIR digital filters from analog filters with examples, Software simulation – Design of IIR Filters.	
5	FIR Digital Filters	07
5.1	Characteristics of FIR digital filters, Linear Phase Filter.	
5.2	Design of FIR filters using window techniques -Rectangular, Hamming, Blackman, Software simulation – Design of FIR Filters.	
6	DSP Processors and Applications	06
6.1	General purpose digital signal processors, DSP processor architecture, Selecting digital signal processors, Special purpose DSP hardware.	
6.2	Applications of DSP: Radar Signal Processing and Speech Processing.

NECPC 53	Software Engineering (Theory)	20	20	60	---	---	100

Course Prerequisite: Fundamentals of Programming (NES14), Data Structures (NECPC31)

Course Objectives:

1	To learn the basics of software engineering and software development process models, agile software development and other agile practices.
2	To Identify, Specify, analyse Software Requirements and prepare model.
3	To understand concepts and principles of software design and Development.
4	To learn about Project Scheduling concept and Software Cost Estimation Techniques.
5	To understand concept of software quality assurance and Risk Management.
6	To learn different software testing strategies and tactics.

Course Outcomes:

After successful completion of the course students will be able to:

1	Apply software engineering concept and choose process models for a software project development.
2	Analyse and specify software requirement specification (SRS) for software system.
3	Convert requirement model into the design model and demonstrate the use of software and user-interface design principles.
4	Generate the project schedule and estimate the cost of software system.
5	Identify risks and prepare RMMM plan for quality software system.
6	Apply testing strategies and tactics for software system.

SOFTWARE ENGINEERING (THEORY)

Module	Contents	Hrs
1	Introduction to Software Engineering and Process Models	06
1.1	Nature of Software, Software Process framework.	
1.2	Prescriptive Models: Waterfall Model, Incremental, RAD Models Evolutionary Process Models Prototyping, Spiral and Concurrent Development Model. Specialized Models: Component based. Introduction to Agile methodology.	
2	Requirement Engineering and Modelling	02
2.1	Feasibility Study Types of Requirements, Requirement Engineering Task, Software Requirement Specification (SRS).	
3	Design Engineering	06
3.1	Developing Use Cases (UML) ,Requirement Model: Scenario-based model, Class-based model, Behavioural model.	
3.2	User Interface Design- Introduction to User Interface (UI) Design: Definition, purpose, and importance in software systems,Key differences between UI and UX,Real- world examples of good and bad UI. Principles of Good UI Design: Core design principles: consistency, simplicity, feedback, visibility.	
4	Project scheduling & Cost Estimation	05
4.1	Project Scheduling, defining a Task Set for the Software Project, Ganttcharts, Program Evaluation Review Techniques (PERT), Tracking the Schedule	
4.2	Software Project Estimation, Decomposition Techniques, LOC based, FP based , COCOMO I Model and COCOMO II Model.	
5	Software Risk & Quality Management	04
5.1	Software Risk, Types of Risk, Risk Identification, Risk Assessment, Risk Projection, RMMM.	
5.2	Software Quality Assurance Task and Plan, McCall's Quality Factors, Software Reliability, Formal Technical Review (FTR).	
6	Software Testing Strategies and Tactics	03
6.1	Software Testing Fundamentals, Testing strategies for conventional and Object-Oriented architectures, Unit testing, Integration testing, System Testing, Validation and System Testing.	
6.2	Testing Tactics: White-Box Testing, Basis Path Testing, Control Structure Testing, Black-Box Testing.

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	Prepare detailed statement of problem with feasibility study and identify suitable process model for the same with justification.
2	Develop Software Requirement Specification (SRS) document in IEEE format for the project.
3	Prepare schedule for the project using any project management tool
4	Prepare RMMM plan for the project.
5	Identify scenarios & develop UML Use case and Class Diagram for the project.
6	Develop Activity / State Transition diagram and Sequence diagram for the project.
7	Develop test cases for the project using white box testing.
8	Estimate project size using LOC, FP, and Use-Case based techniques
9	Apply the COCOMO II model for cost and effort estimation.
10	Write and review a Software Quality Assurance (SQA) plan.
11	Conduct Integration and System Testing on a modular application.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

NECPE 151	Statistics for Engineers (Theory)	20	20	60	---	---	100

Course Prerequisite: Fundamentals of Engineering Mathematics-1 (NBS11), Fundamentals of Engineering Mathematics-2 (NBS21).

Course Objectives:

- 1 To understand basic statistical foundations for roles of Data Scientist.
- 2 To develop problem-solving skills.
- 3 To infer about the population parameters using sample data and perform hypothesis testing.
- 4 To understand the importance and techniques of predicting a relationship between data and determine the goodness of model fit.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Develop various visualizations of the data in hand.
- 2 Analyze a real-world problem and solve it with the knowledge gained from probability distributions.
- 3 Analyze large data sets and perform data analysis to extract meaningful insights from the sampling and its distributions.
- 4 Fit a regression model to data and use it for prediction.
- 5 Develop and test a hypothesis about the population parameters to draw meaningful conclusions.
- 6 Develop inference on decision making using decision trees.

STATISTICS FOR ENGINEERS (THEORY)

Module	Contents	Hrs
1	Introduction	05
1.1	Data and Statistics: Elements, Variables, and Observations, Scales of Measurement, Categorical and Quantitative Data, Descriptive Statistics: Tabular and Graphical Summarizing Categorical Data, Summarizing Quantitative Data, Cross Tabulations and Scatter Diagram.	
1.2	Descriptive Statistics: Measures of dispersion, central tendency, Detecting Outliers, Box Plot.	
2	Probability	06
2.1	Probability : Experiments, Counting Rules, and Assigning Probabilities, Events and Their Probabilities, Complement of an Event, Addition Law Independent Events, Multiplication Law, Bayes' theorem, Central limit Theorem.	
2.2	Discrete Probability Distributions Random Variables, Discrete Probability Distributions, Expected Value and Variance, Binomial Probability Distribution and Poisson Probability Distribution without proof.	
2.3	Continuous Probability Distributions: Uniform Probability Distribution, Normal Curve, Standard Normal Probability Distribution without proof, Computing Probabilities for Any Normal Probability Distribution.	
3	Sampling and Sampling Distributions	05
3.1	Sampling Methods, Simple random sampling with and without replacement, Stratified Random Sampling, Cluster Sampling, Systematic Sampling, Convenience Sampling, Judgment Sampling.	
3.2	Interval Estimation: Population Mean: Known, Population Mean: Unknown, Determining the Sample Size, Population Proportion.	
4	Hypothesis Tests	10
4.1	Developing Null and Alternative Hypotheses, Type I and Type II Errors, One tailed and two tailed test.	
4.2	Small samples test (student's t - distributions), Large samples test (z - test).	
5	Regression	08
5.1	Simple Linear Regression: Simple Linear Regression Model, Regression Model and Regression Equation, Estimated Regression Equation, Least Squares Method, Coefficient of Determination, Correlation Coefficient, Model Assumptions, testing for Significance, Using the Estimated Regression	

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

	Equation for Estimation and Prediction Residual Analysis: Validating Model Assumptions.	
5.2	Multiple Regression: Multiple Regression Model, Least Squares Method, Partial correlation coefficients and Partial regression coefficients.	
6	Decision Theory	05
6.1	Decision making in case of unknown probability of events: Maximin Criterion, Minimax Criterion, Maximax Criterion, Minimin Criterion, Laplace Criterion, Savage method, Hurwitz criterion. Decision Table, Decision trees.

Continuous Assessment:

Continuous Assessment is of **20 marks**. The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following:

Sr. No	Rubrics	Marks
1	Certificate course for 4 weeks or more: NPTEL/ Coursera/ Udemy/any MOOC	10 marks
2	Wins in the event/competition/hackathon pertaining to the course.	10 marks
3	Content beyond syllabus presentation	10 marks
4	Creating Proof of concept	10 marks
5	Mini Project / Extra Experiments/ Virtual Lab	10 marks
6	GATE Based Assignment test/Tutorials etc	10 marks
7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

End Semester Theory Examination:

1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

Department of Electronics and Computer Science

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	Introduction to Python/MATLAB for Statistical Computing
2	Implementation of Importing and Cleaning Data using Python/MATLAB
3	Generate and interpret basic plots like histograms, Bar Charts and box plots.
4	Calculate mean, median, mode, variance, and standard deviation.
5	Detection of Outliers using box plots and Z-Score
6	Simulate and visualize probability distributions: Binomial and Poisson distribution
7	Simulate, calculate probabilities and visualize the normal distribution curve.
8	Simulate the Central Limit Theorem through sampling.
9	Apply various sampling methods i.e Simple, Stratified, Systematic on datasets
10	Construct confidence intervals from sample data and estimate population parameters with specified confidence..
11	Perform hypothesis testing (z-test, t-test) for single samples
12	Compute and compare two population means using t-tests
13	Perform Chi-Square Test for Independence.
14	Perform Linear Regression Analysis and fit and evaluate simple regression models.
15	Analyze datasets with multiple predictors using Multiple Linear Regression
16	Evaluate the fitness of regression models using residual analysis method
17	Compute and interpret Pearson and Spearman correlation coefficients.
18	Solve decision problems using Maximin, Minimax, Laplace, and Savage criteria.
19	Evaluate decision trees for classification problems.
20	Mini Project: Real-World Data Analysis (Healthcare, Finance, etc.)

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Term-Work:	
1	Term work should consist of 10 experiments.
2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	Total 25 Marks (Experiments: 15-marks, Term work Assessment: 10-marks)

Course Prerequisite: Data structures (NECPC31), Discrete structures and Automata Theory (NECPC43).

Course Objectives:

- 1 To provide mathematical approaches for Analysis of Algorithms.
- 2 To understand and solve problems using various algorithmic approaches.
- 3 To analyze algorithms using various methods.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Analyze the running time and space complexity of algorithms.
- 2 Describe, apply and analyze the complexity of divide and conquer strategy.
- 3 Describe, apply and analyze the complexity of greedy strategy.
- 4 Describe, apply and analyze the complexity of dynamic programming strategy.
- 5 Explain and apply backtracking, branch and bound.
- 6 Explain and apply string matching techniques.

DESIGN AND ANALYSIS OF ALGORITHMS (THEORY)

Module	Contents	Hrs
1	Introduction	08
1.1	Brief introduction of Algorithms and its design methods. Analysis of Algorithm - Time & Space Complexity. Growth of Functions: Asymptotic Notation (O , Ω , θ , w , o), Standard Notation and Common Functions. Complexity class: Definition of P, NP, NP-Hard, NP-Complete Analysis of selection sort, insertion sort.	
1.2	Recurrences: The substitution method, Recursion tree method, Master method	
2	Divide and Conquer Approach	06
2.1	General Method, Analysis of Merge Sort, Analysis of Quick sort, Analysis of Binary search.	
2.2	Strassen's Matrix Multiplication.	
3	Greedy Method Approach	07
3.1	General Method, Single source shortest path-Dijkstra's algorithm, Job sequencing with deadlines, Fractional Knapsack problem,	
3.2	Minimum cost spanning trees-Kruskal and Prim's algorithm.	
4	Dynamic Programming Approach	08
4.1	General Method, Multistage graphs, Single source shortest path: Bellman Ford Algorithm, All pair shortest path problem: Floyd Warshall Algorithm.	
4.2	Assembly-line scheduling Problem, 0/1 knapsack Problem, Travelling Salesperson problem, longest common subsequence.	
5	Backtracking and Branch and bound	06
5.1	Backtracking: General method, N queen problem, Sum of subsets, Graph coloring.	
5.2	Branch and Bound: Travelling salesman problem, 15 puzzle problem.	
6	String Matching algorithms	04
6.1	The Naïve string-matching algorithm, The Rabin Karp algorithm, The Knuth-Morris-Pratt algorithm

NECPE153	Communication Systems (Theory)	20	20	60	---	---	100

Course Prerequisite: Digital System Design (NECPC32), Electronics Devices and Circuits (NECPC41).

Course Objectives:

1	To understand and analyse the need for various analog modulation techniques.
2	To analyse the characteristics of the receivers.
3	To understand pulse modulation methods.
4	To understand the effect of ISI in Baseband transmission of a digital signal.
5	To analyse various Digital modulation techniques.

Course Outcomes:

After successful completion of the course students will be able to:

1	Understand the fundamentals of electronic communication and analyze the impact of noise on system performance.
2	Analyse various analog modulation methods.
3	Analyse the characteristics of radio receivers.
4	Explain various pulse modulation techniques.
5	Analyze pulse shaping techniques and apply methods to mitigate inter-symbol interference in digital communication.
6	Compare various Digital modulation methods based on spectral efficiency, Euclidean distance etc.

COMMUNICATION SYSTEMS (THEORY)

Module	Contents	Hrs
1	Introduction to Electronic Communication	04
1.1	Electromagnetic Spectrum	
1.2	Block diagram of Analog communication system	
1.3	Need for modulation	
1.4	Types of Noise, Signal-to-noise ratio, Noise factor, Noise Figure, Noise Temperature	
2	Analog Modulation Systems	12
2.1	Principle of Amplitude Modulation (AM): Representation of AM wave (Mathematical & Graphical), Frequency spectrum of AM wave, AM Power Distribution, AM for a Complex Modulating Signal	
2.2	Types of AM: Generation of DSB-SC using diode based balanced modulator, Generation of SSB using phase shift method	
2.3	Principles of Angle Modulation: Theory of Frequency Modulation (FM) & Phase Modulation (PM) - Basic Concepts, Spectrum Analysis of FM Wave, Noise triangle, Pre-emphasis, De-emphasis	
2.4	Comparison of AM, FM and PM	
3	Radio Transmitters and Receivers	04
3.1	Radio Transmitters: Block diagram of AM & FM transmitters	
3.2	Radio receivers: Receiver Characteristics, Superheterodyne Receiver, diode detector, Automatic gain control (AGC), Automatic frequency control (AFC)	
4	Pulse Modulation	05
4.1	Sampling theorem and quantization of signals	
4.2	Generation and Detection of Pulse Amplitude Modulation (PAM)	
4.3	Pulse Code Modulation (PCM), and Delta Modulation (DM)	
4.4	Multiplexing Techniques: Time Division Multiplexing (TDM):T1 carrier system, Frequency Division Multiplexing (FDM)	
5	Pulse Shaping for Optimum Transmission	04
5.1	Line codes and their desirable properties	
5.2	Concept of Inter symbol interference (ISI), Eye diagram: Quality Factor and BER, Nyquist Bandwidth	
5.3	Types of equalizers: Linear equalizer	
5.4	Correlative coding: Duo-binary encoding and modified duo-binary encoding	
6	Digital Modulation Techniques	10

NECMM 53	Internet of Things (Theory)	20	20	60	---	---	100

Course Prerequisite: Microprocessor and Microcontroller (NECMM34), Embedded System and RTOS (NECMM44)

Course Objectives:

1	To understand the basic building blocks of IoT
2	To understand various IoT protocols.
3	To introduce data handling in IoT
4	To understand the Design Methodology in IoT through case studies.

Course Outcomes:

After successful completion of the course students will be able to:

1	Understand concepts, functional blocks and communication methodology relevant to IoT.
2	Identify various components of IoT
3	Compare various communication protocols for IoT.
4	Understand various methods for data handling in IoT-based systems.
5	Design basic applications based on IoT using specific components.
6	Introduce various security issues in IoT.

INTERNET OF THINGS (THEORY)

Module	Contents	Hrs
1	Introduction to IoT	05
1.1	Definition and Characteristics of IoT, IoT Protocols, IoT Functional Blocks, IoT Communication Models.	
1.2	IoT Communication APIs: - REST and WebSocket's, IoT Enabling Technologies, Introduction to M2M and Difference between IoT and M2M.	
2	Components (Things) in IoT	05
2.1	Sensor Technology, Examples of Sensors.	
2.2	Actuators, Applications of RFID and WSN in IoT, Exemplary Device: - R-Pi and its Interfaces, PCDuino, Beagle Bone	
3	Data Handling in IoT	09
3.1	Data Acquiring and Storage, Organizing the Data, Transactions and Business Processes, Analytics.	
3.2	Data Collection, Storage and Computing Using Cloud Platform.	
3.3	Introduction to Cloud Computing, Virtualization, Cloud Models, Cloud Services.	
4	Design Principles for Web Connectivity	10
4.1	Communication Technologies – A comparison.	
4.2	Web Communication Protocols for connected devices: - CoRE Environment, CoAP, LWM2M, MQTT, XMPP, HTTP, SOAP Protocols.	
4.3	LPWAN Fundamentals: LORA and NBIoT.	
5	IoT Design Methodology	06
5.1	Defining Specifications About: - Purpose & requirements, process, domain model, information model, service, IoT level, Functional view, Operational view, Device and Component Integration, Case Study on Home automation, Case Study on Weather Monitoring.	
5.2	IoT Levels and Deployment Templates.	
6	IoT Security and Vulnerabilities Solutions	04
6.1	IoT Security Tomography and Layered Attacker Model	
6.2	Identity Management, Establishment, Access Control and Secure Message Communication.	
Total		39

Department of Electronics and Computer Science

Suggested Experiments: Students are required to complete at least 08 experiments.	
Sr.No.	Name of the Experiments
1	Introduction to Arduino/Raspberry Pi/ESP32 Pin configuration, IDE setup, and basic programming
2	Blinking LED using Arduino/ESP32 Digital output pin control
3	Interfacing Temperature Sensor (e.g., LM35 or DHT11) Analog/Digital sensor read and display on serial monitor
4	Interfacing Motion Sensor (PIR) Motion detection and triggering an alert (e.g., buzzer or LED)
5	Interfacing Gas Sensor (MQ2/MQ135) Gas level detection and real-time monitoring
6	Sending Sensor Data to a Mobile Device via Bluetooth (HC-05) Simple data logging or monitoring via a mobile app
7	Sending Sensor Data to ThingSpeak/Adafruit IO Cloud dashboard setup and data visualization
8	Case study on advance topic - Smart Energy Meter using IoT Measure voltage, current, and send data to cloud
9	Case study of recent development in the subject - IoT-Based Health Monitoring System Integrate heartbeat, SpO2, and temperature sensors with cloud display

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

NECPC61	Analog VLSI (Theory)	20	20	60	---	---	100

Course Prerequisite:

Digital System Design (NECPC32), Electronic Devices and Circuits, (NECPC41), Digital VLSI (NECPC51).

Course Objectives:

- 1 To know importance of Mixed Signal VLSI design in the field of Electronics.
- 2 To understand various methodologies for analysis and design of fundamental CMOS analog and mixed signal Circuits.
- 3 To learn various issues associated with high performance Mixed Signal VLSI Circuits.
- 4 To design, implement and verify various mixed signal VLSI circuits using open source tools like Ngspice and Magic.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Know operation of the various building blocks of analog and mixed signal VLSI circuits.
- 2 Demonstrate the understanding of various building blocks and their use in design of analog and mixed signal circuits.
- 3 Derive expression for various performance measures of analog and mixed signal circuits in terms of parameters of various building blocks used to build the circuit.
- 4 Analyze and relate performance of analog and mixed signal VLSI circuits in terms of design parameters.
- 5 Evaluate and select appropriate circuit/configuration for given application.
- 6 Design analog and mixed signal VLSI circuits for given application.

ANALOG VLSI (THEORY)

Module	Contents	Hrs
1	Integrated Circuit Biasing Techniques	06
1.1	Simple current mirror, Cascode current mirror.	
1.2	Current and voltage references, Band gap reference generator.	
2	Single Stage MOS Amplifiers	10
2.1	Common-source stage (with resistive load, diode connected load, current-source load, triode load, source degeneration), source follower, common-gate stage, Cascode stage, folded Cascode stage.	
2.2	Single-ended operation, differential operation, basic differential pair, large-signal and small-signal behavior, common-mode response, differential pair with MOS loads.	
3	Noise in MOS Circuits	04
3.1	Noise spectrum, correlated and uncorrelated noise sources, thermal noise, flicker noise, shot noise.	
3.2	Representation of noise in circuits, noise in single stage CS.	
4	CMOS Operational Amplifier	06
4.1	Design of Current Mirror Load Differential Amplifier,	
4.2	Design of two stage Operational Transconductance Amplifier, Opamp Compensation Techniques.	
5	Data Converter Fundamentals	04
5.1	ADC parameters, Sample and Hold amplifier.	
5.2	Mixed signal Layout issues, Floor planning, Power supply and Ground issues.	
6	Data Converter Architectures	09
6.1	Charge scaling DACs, Cyclic DAC, Pipeline DAC.	
6.2	Flash ADC, Single Slope Integrating ADC, and Successive approximation ADC

NECPC62	Computer Communication and Networking (Theory)	20	20	60	---	---	100

Course Prerequisite: Communication System.	
Course Objectives:	
1	To understand the fundamental concepts of computer networking, protocols, architectures, and applications.
2	To study the multiple layer design issues, services, and state-of-the-art protocols of TCP/IP and OSI based Architectures.
3	To help students to acquire knowledge of address in the configuration of various scales of networks.
4	To be conversant with the principles of Network Application Programming.
Course Outcomes:	
After successful completion of the course students will be able to:	
1	Enumerate the layers of OSI model and TCP/IP model and describe their functions.
2	Identify the characteristics of network devices and media used to design networks.
3	Demonstrate the knowledge of networking protocols at various layers of TCP/IP model.
4	Classify the routing protocols and analyse how to assign the IP addresses for a given network.
5	Design and configure the networks using IP addressing and sub-netting / super-netting schemes.

Department of Electronics and Computer Science

Lab Outcomes:

After successful completion of the lab course students will be able to:

1	Students will be able to identify key network hardware components and configure network settings using Linux and Windows tools.
2	Students will develop and simulate client-server communication models using TCP and UDP protocols in NS-2 and NetSim.
3	Students will demonstrate the ability to capture, analyze, and interpret network traffic using Wireshark and apply packet sniffing techniques.
4	Students will configure routing tables, manage IP forwarding, and set up firewalls using IPTables on both Linux and Windows platforms.
5	Students will simulate and evaluate the performance of wireless networks (WiMAX, ZigBee, Bluetooth) based on parameters like throughput, range, and power consumption.
6	Students will implement Wireless Sensor Networks using the LEACH protocol in NS-2 and analyze the impact of node density and clustering on energy consumption and network lifetime.

Suggested Experiments: Students are required to complete at least 10 experiments.

Sr.No.	Name of the Experiments
1	To study network components.
2	To build a simple client-server model in NS-2, demonstrating TCP or UDP-based communication.
3	To study the working of wireshark, a packet sniffing tool, and analyze network traffic using sniffing technique.
4	To understand and implement socket programming using NetSim for communication between client and server.
5	To view, add, delete, and modify routing tables and configure IP forwarding using IP tables in Windows operating systems.
6	Use a tool (Eg. NS2) to implement a specific Network topology with respect to the given number of nodes and physical configuration and do: ● Graphical simulation of network with Routing Protocols and traffic consideration (TCP, UDP) ● Analysis of network performance for quality parameters such as packet-delivery-ratio, delay, and throughput
7	Set up and configuration of firewalls in Linux/windows (Use IP Tables)
8	To install and configure the WiMAX module in NS-2 and study how varying the symbol rate (low vs. high) affects throughput, latency, and packet loss.
9	Use basic networking commands in Linux (ping, tracer, nslookup, netstat, ARP, RARP, ip, ifconfig, dig, route, etc) and set up a network environment with multiple IP addresses and configuration of ARP tables. Set up a network environment in Windows platform also.
10	Working with routing in Linux: ● View the current routing table

VIVEKANAND EDUCATION SOCIETY'S

Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

	● Add and delete routes ● Change default gateway Perform IP Tables for IP forwarding.
11	Configure and simulate either a Bluetooth or ZigBee network in NS-2. To compare key performance metrics (throughput, range, power consumption) with other wireless technologies (Wi-Fi, MANET). To examine how different topologies (star, mesh) and superframe structures (in ZigBee) influence network behavior.
12	To implement and analyze a Wireless Sensor Network using the LEACH protocol in NS-2. To study energy consumption, network lifetime, and packet delivery under various node densities and clustering scenarios. To explore the “new” wireless trace file format in NS-2 for gathering detailed WSN simulation metrics.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Term-Work:	
1	Term work should consist of 10 experiments.
2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	Total 25 Marks (Experiments: 15-marks, Term work Assessment: 10-marks)

NECPE261	Software Testing and Quality Assurance (Theory)	20	20	60	---	---	100

Course Prerequisite: Fundamentals of Programming (NES14), Software Engineering (NECPC53).

Course Objectives:

1	To provide students with knowledge in Software Testing techniques.
2	To provide knowledge of Black Box and White Box testing techniques.
3	To provide skills to design test case plans for testing software.
4	To prepare test plans and schedules for testing projects.
5	To understand how testing methods can be used in a specialized environment.
6	To understand how testing methods can be used as an effective tool in providing quality assurance concerning software.

Course Outcomes: After successful completion of the course students will be able to:

1	Investigate the reason for bugs and analyse the principles in software testing to prevent and remove bugs.
2	Understand various software testing methods and strategies.
3	Design test planning.
4	Manage the test process.
5	Apply the software testing techniques in the commercial environment.
6	Use practical knowledge of a variety of ways to test software and quality attributes

SOFTWARE TESTING and QUALITY ASSURANCE (THEORY)

Module	Contents	Hrs
1	Testing Methodology	08
1.1	Introduction to Software Testing: Introduction, Goals of Software Testing, Software Testing Definitions, Model for Software Testing, Effective Software Testing vs Exhaustive Software Testing, Software Failure Case Studies.	
1.2	Software Testing Terminology and Methodology: Software Testing Terminology, Software Testing Life Cycle (STLC), Software Testing methodology.	
1.3	Verification and Validation: Verification, Verification requirements, Validation.	
2	Testing Techniques	09
2.1	Black Box testing: boundary value analysis, equivalence class testing, state table-based testing, cause-effect graphing based testing, error guessing.	
2.2	White box Testing Techniques: need, logic coverage criteria, basis path testing, graph matrices, loop testing, data flow testing, mutation testing, Static Testing.	
2.3	Validation Activities: Unit validation, Integration, Function, System, Acceptance Testing.	
2.4	Regression Testing: Progressive vs. Regressive	
3	Managing the Test Process	07
3.1	Test Management: test organization, structure and of testing group, test planning, detailed test design and test specification.	
3.2	Software Metrics: need, definition and classification of software matrices.	
3.3	Efficient Test Suite Management: minimizing the test suite and its benefits	
4	Test Automation	04
4.1	Automation and Testing Tools: need, categorization, selection and cost in testing tool.	
4.2	Guidelines for testing tools.	
5	Testing for specialized environment	05
5.1	Agile Testing, Agile Testing Life Cycle, Challenges in Agile Testing.	
5.2	Testing Object-Oriented Software: OOT Basics, Object-oriented Testing.	
6	Quality Management	06
6.1	Software Quality Management, McCall's quality factors and Criteria	
Total		39

2	Software Testing Concepts and Tools, Nageswara Rao Pusuluri, Dreamtech press.

Internal Assessment:	
1	Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks.
2	Mid Term test is to be conducted when approx. 50% syllabus is completed.
3	Duration of the midterm test shall be one hour.

Continuous Assessment:		
Continuous Assessment is of 20 marks . The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following:		
Sr. No	Rubrics	Marks
1	Certificate course for 4 weeks or more: NPTEL/ Coursera/ Udemy/any MOOC	10 marks
2	Wins in the event/competition/hackathon pertaining to the course.	10 marks
3	Content beyond syllabus presentation	10 marks
4	Creating Proof of concept	10 marks
5	Mini Project / Extra Experiments/ Virtual Lab	10 marks
6	GATE Based Assignment test/Tutorials etc	10 marks
7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

End Semester Theory Examination:	
1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

		Mid-Term Test	Continuous Assessment				
NECPE2L61	Software Testing and Quality Assurance (Lab)	---	---	---	25	25	50

Lab Prerequisite: Programming Language (C++, Java), Software Engineering.

Lab Objectives:

1	To understand the core principles, terminology, and lifecycle of software testing through practical implementation.
2	To analyze software systems for potential failures and apply verification and validation techniques.
3	To design and execute test cases using both black box (e.g., boundary value analysis) and white box (e.g., basis path testing) techniques.
4	To gain hands-on experience with test management tools like Qase and defect tracking tools like JIRA.
5	To automate test cases using modern tools such as Selenium and understand their integration in a real-time testing framework.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

6	To apply software testing metrics and quality models to evaluate and enhance software product quality.
Lab Outcomes: After successful completion of the lab course students will be able to:	
1	Demonstrate an understanding of different testing methodologies, software failures, and their causes through case study analysis.
2	Design effective test cases using black box and white box testing techniques and execute them manually.
3	Create and interpret control flow graphs for conducting basis path and loop testing.
4	Use tools such as Selenium, Qase, and JIRA for automating and managing the software testing process.
5	Analyze and report software defects, regression scenarios, and test coverage using appropriate metrics.
6	Apply agile testing techniques and quality models to ensure high-quality deliverables in agile environments.

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	To study software testing fundamentals and analyze real-world software failure case studies.
2	Write a program for any one function of the selected system. Introspect the causes for its failure and write down the possible reasons for its failure.
3	Study the system, requirement specifications and designing the system.
4	To implement white box testing techniques like basis path testing and loop testing using control flow graphs.
5	Select the test cases (positive and negative scenarios) for the selected system.
6	Design Test cases for the system using boundary value analysis or equivalent class partitioning.
7	Manual execution of test cases and prepare defect reports.
8	Identify regression scenarios for automation for any one/two test case.
9	To identify and compute relevant software testing metrics such as defect density and code coverage.
10	To use a test automation tool (e.g., Selenium) for automating test cases on a web application.
11	Study of any test management tool (e.g. Qase).
12	Writing down test cases and execution using tools (e.g. Qase).
13	Study defect management (e.g. JIRA)
14	Design quality matrix for your system.
15	To perform agile testing practices and prepare test cases in an agile project environment.

3	Students will apply mathematical concepts like eigen decomposition, vector norms, and SVD in ML tasks.
4	Students will be able to implement and differentiate between various classification, regression, and clustering algorithms.
5	Students will understand the challenges of high-dimensional data and apply PCA and feature selection techniques.
6	Students will design and implement neural networks for simple classification problems using perceptron and MLP.

Suggested Experiments: Students are required to complete at least 10 experiments.

Sr.No.	Name of the Experiments
1	To understand and implement a basic machine learning pipeline using a standard dataset.
2	To demonstrate cross-validation and analyze overfitting and underfitting in machine learning models.
3	To evaluate the performance of classification models using confusion matrix and other performance metrics.
4	To perform vector operations and compute distances between vectors using Python.
5	To compute eigenvalues, eigenvectors, and perform Singular Value Decomposition (SVD) of a matrix.
6	To implement linear regression on a real-world dataset and interpret model coefficients.
7	To compare regularized regression techniques (Ridge and Lasso) and observe their effect on model performance.
8	To implement Support Vector Machine (SVM) for binary classification using different kernels.
9	To apply K-Means clustering algorithm and visualize cluster separation.
10	To implement Expectation-Maximization (EM) algorithm for Gaussian Mixture Models and analyze results.
11	To implement a single-layer perceptron for classifying linearly separable data.
12	To build and train a multi-layer perceptron using backpropagation algorithm.
13	To implement logistic regression for binary classification using a real-world dataset.
14	To apply Principal Component Analysis (PCA) for dimensionality reduction and data visualization.
15	To perform feature selection and analyze its impact on model performance.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Course Prerequisite:

Data Structures (NECPC31), Database Management System (NECPC42), Design and Analysis of Algorithm (PEC1).

Course Objectives:

- 1 To identify the scope and understand the fundamentals of Data Warehousing and Mining.
- 2 To understand the importance of data warehouse that would assist in providing business insights for data mining applications.
- 3 To instigate research interest towards advances in Data Mining.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Understand Data Warehousing fundamentals and Dimensionality modelling principles.
- 2 Understand the use of ETL techniques and apply OLAP operations.
- 3 Perceive the importance of data pre-processing and basics of data mining techniques.
- 4 Relate to the concepts of market basket analysis in real world applications.
- 5 Apply classification algorithms in real world dataset for classification and prediction.
- 6 Visualize the concept of clustering and its applications.

DATA WAREHOUSING and MINING (THEORY)

Module	Contents	Hrs
1	Data Warehousing and Dimension Modelling	08
1.1	Introduction to Data Warehouse, Characteristics of Data Warehouse	
1.2	Components of Data warehouse Architecture, Data warehouse architecture	
1.3	Data warehouses versus Data Marts.	
1.4	E-R Modelling versus Dimensional Modelling,	
1.5	Data Warehouse Schemas; Star Schema, Snowflake Schema, Fact Less Fact Table, Fact Constellation Schema.	
1.6	Inside Dimensional Table, Inside Fact Table.	
1.7	OLTP Systems versus OLAP.	
2	ETL and OLAP	06
2.1	Major steps in ETL process, Data Extraction Methods	
2.2	Data Transformation; Basic Tasks in Transformation, Major Data Transformation Types	
2.3	Data Loading Techniques.	
2.4	What is Multidimensional Data, OLAP Models: MOLAP, ROLAP.	
2.5	OLAP operations: Slice, Dice, Rollup, Drilldown and Pivot.	
3	Data Mining and Data pre-processing	07
3.1	Introduction to data mining, Architecture for Data Mining.	
3.2	KDD process, Data Mining Functionalities, Interestingness Measures.	
3.3	Classification of data mining system, major issues in data mining.	
3.4	Data Summarization, Data Cleaning, Data Integration and Transformation,	
3.5	Data Reduction, Data Discretization and Concept Hierarchy Generalization.	
4	Mining frequent patterns and associations	05
4.1	Market Basket Analysis, Frequent Item, Closed Item sets, & Association Rule	
4.2	Frequent Pattern Mining, Efficient and Scalable Frequent Item set Mining Methods: Apriori Algorithm.	
5	Classification and Prediction	07
5.1	Definition, Decision tree induction	
5.2	Bayesian classification	
5.3	Introduction to prediction, Linear and logistic regression techniques	
5.4	Accuracy and error measures.	
6	Cluster analysis	06
6.1	Definition, Distance Measures,	
6.2	Clustering Algorithms: Partitioning- K means and K-medoids

Internal Assessment:

1	Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks.
2	Mid Term test is to be conducted when approx. 50% syllabus is completed.
3	Duration of the midterm test shall be one hour.

Continuous Assessment:

Continuous Assessment is of **20 marks**. The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following:

Sr. No	Rubrics	Marks
1	Certificate course for 4 weeks or more: NPTEL/ Coursera/ Udemy/any MOOC	10 marks
2	Wins in the event/competition/hackathon pertaining to the course.	10 marks
3	Content beyond syllabus presentation	10 marks
4	Creating Proof of concept	10 marks
5	Mini Project / Extra Experiments/ Virtual Lab	10 marks
6	GATE Based Assignment test/Tutorials etc	10 marks
7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

VIVEKANAND EDUCATION SOCIETY'S

Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

End Semester Theory Examination:	
1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

DATA WAREHOUSING AND MINING (LAB)

Course Code	Course Name	Teaching Scheme (Teaching Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut	Total
NECPE2L63	Data Warehousing and Mining (Lab)	---	02	---	---	01	---	01

Course Code	Course Name	Examination Scheme					
		Theory			Term Work	Practical & Oral	Total
		Internal Assessment		End Sem Exam			
		Mid-Term Test	Continuous Assessment				
NECPE2L63	Data Warehousing and Mining (Lab)	---	---	---	25	25	50

Lab Outcomes:

After successful completion of the lab course students will be able to:

1	Understand data transformation and visualization.
2	Perform OLAP operations for multidimensional data analysis.
3	Apply classification techniques.
4	Implement association and decision tree algorithms.
5	Develop predictive models using linear and multiple regression.
6	Perform clustering using K-Means algorithm.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	One case study on building Data warehouse/Data Mart - Write Detailed Problem statement and design dimensional modelling (creation of star and snowflake schema) - Implementation of all dimension table and fact table
2	To Perform Data Processing and Visualization using open-source tool like Power Bi / Tableau etc..
3	To perform data transformation and OLAP operations using open-source tool like Power Bi / Tableau etc...
4	To perform classification using the Random Forest algorithm using open-source tool (WEKA, R tool, XL Miner, Orange etc.)
5	To perform classification using the Naïve Bayes algorithm using open-source tool (WEKA, R tool, XL Miner, Orange etc.)
6	To implement the Apriori algorithm using open-source tool (WEKA, R tool, XL Miner, Orange etc.)
7	To implement the ID3 algorithm for decision tree learning using Python/Java.
8	To implement the Naïve Bayes classification algorithm using Python/Java.
9	To implement Linear Regression for predictive analysis using Python/Java
10	To implement Multiple Regression for predictive analysis using Python/Java
11	To implement the K-Means Clustering algorithm using Python/Java.
12	Demo on any cloud-based data warehousing process which gives a holistic view of Data Warehouse

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

NECPE361	Digital Image Processing (Theory)	20	20	60	---	---	100

Course Prerequisite: Digital Signal Processing (NECPC52)	
Course Objectives:	
1	To learn the fundamental concepts of image processing for image enhancement.
2	To learn image compression, segmentation techniques with practical applications.
3	To provide basic concepts of computer vision and its applications.
Course Outcomes:	
After successful completion of the course students will be able to:	
1	Represent image in its numerical and graphical form.
2	Perform different image enhancement approaches for improving image quality.
3	Elucidate the mathematical modelling of image segmentation and morphology.
4	Apply the concept of image compression.
5	Understand computer vision system elements.
6	Develop a computer vision system based on requirement.

DIGITAL IMAGE PROCESSING (THEORY)

Module	Contents	Hrs
1	Fundamentals of Digital Image Processing	04
1.1	Introduction of image processing, Different types of images, Visual perception, Image sensing and Acquisition, Quantization, Sampling, color image processing, Revision of Mathematical concepts for image processing.	
2	Enhancement in Spatial and Frequency domain	06
2.1	Intensity transformation, Filtering in spatial and Frequency domain: Image negatives, Log transformations, Histogram processing, Spatial filter: smoothing and Sharpening, Discrete Fourier transform, properties of 2-D DFT, Image smoothing and Sharpening in Fourier domain.	
3	Image transforms	05
3.1	Two-dimensional orthogonal and Unitary transforms, Properties of Unitary transforms, 2D DFT, Cosine transforms, Hadamard transforms, Comparison of image transforms.	
4	Edge Detection and Wavelet transform	10
4.1	Gradient and Laplacian based edge detection, Diffusion based edge detection: Isotropic and anisotropic diffusion.	
4.2	Wavelet transform for Image Processing: Multi resolution expansion, Wavelet functions, Wavelet Series expansion, Discrete Wavelet transforms, Wavelet transforms for two-dimensional signals (images), Applications of wavelet transforms for edge extraction, noise suppression.	
5	Image Segmentation and Restoration	09
5.1	Thresholding, region-based Morphological Watersheds, Bayesian based image segmentation.	
5.2	Image restoration and reconstruction: Models of image degradation, noise models, Spatial and Frequency domain based approaches for image restoration, Wiener Filtering.	
6	Image Compression	05
6.1	Spatial and Temporal redundancy, Basic image compression models, compression standards, basic compression methods: Huffman coding, Run-length coding, Block transform coding, Predictive coding

NECPE 3L61	Digital Image Processing (Lab)	---	---	---	25	25	50

Lab Outcomes:

After successful completion of the lab course students will be able to:

1	Describe digital image representation, manipulation and illustrate the use of histograms.
2	Use and Compare various Linear filtering methods.
3	Applying various Ideal filters in the frequency domain and understand the concept of edge detection.
4	Compose various Morphological operations on binary images and generate their transformed images.
5	Applying various Geometric transformations on image and Illustrate Two- dimensional Fourier transform.

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	Simulation and Display of an Image, Negative of an Image (Binary & Gray Scale).
2	Contrast stretching of a low contrast image, Histogram, and Histogram Equalization.
3	Read an 8 bit image and then apply different image enhancement techniques: (a) Brightness improvement (b) Brightness reduction (c) Thresholding (d) Negative of an image (e) Log transformation (f) Power Law transformation.
4	Display of bit planes of an Image.
5	Computation of Mean, Standard Deviation, Correlation coefficient of the given Image.
6	Implement various Smoothing spatial filters. Write a program to implement various low pass filters and high pass filters in frequency domain.
7	Display of FFT (1-D & 2-D) of an image.
8	Implement and study the effect of Different Mask (Sobel, Prewitt and Roberts).
9	Implementation of image sharpening filters and Edge Detection using Gradient Filters.
10	Implement different interpolation techniques on image.
11	Implement Image compression using DCT Transform.
12	Write a program for erosion and dilation, opening & closing using inbuilt and without inbuilt function.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Term-Work:	
1	Term work should consist of 10 experiments.

Course Prerequisite: NECPC 41: Electronic Devices and Circuits,
NECMM 42: Embedded Systems and RTOS

Course Objectives:

- | | |
|---|--|
| 1 | To provide knowledge of MEMS fabrication steps. |
| 2 | To provide knowledge of MEMS Materials with respect to applications. |
| 3 | To demonstrate the use of semiconductor-based fabrication processes for sensors and actuators. |
| 4 | To provide an understanding of basic design and operation of MEMS sensors, actuators and passive structures. |

Course Outcomes:

After successful completion of the course students will be able to:

- | | |
|---|--|
| 1 | Understand the different MEMS devices and their working principles. |
| 2 | To use materials for common micro components and devices. |
| 3 | Develop different concepts of MEMS sensors and actuators for real-world applications. |
| 3 | Develop different concepts of MEMS sensors and actuators for real-world applications. |
| 4 | Understand the rudiments of Micro-fabrication techniques. |
| 5 | Understand the basic principles and application of Cantilever structure, Micro heaters, Accelerometers, Pressure Sensor etc. |
| 6 | Understand reliability and various failure mechanisms for MEMS devices. |

MICRO ELECTRO-MECHANICAL SYSTEMS (THEORY)

Module	Contents	Hrs
1	Introduction to MEMS	04
1.1	Introduction to MEMS and Microelectronics Technologies.	
1.2	MEMS in Real world applications such as Air-Bag, DMD, Pressure Sensors, MEMS Challenges, MEMS Sensors in Internet of Things (IoT), Bio-medical applications.	
2	MEMS Materials and Their Properties	07
2.1	Use of Si, SiO ₂ , SiN, SiC, Cr, Au, Al, Ti, SU8, PMMA, Pt in building MEMS applications.	
2.2	Material properties such as Young modulus, Poisson's ratio, density, piezo resistive coefficients, TCR, Thermal Conductivity, Thermoelectricity.	
3	MEMS Sensors and Actuators	07
3.1	Types of MEMS Sensing (Capacitive, Piezoelectric, Piezo resistive).	
3.2	Micro Actuation principles: Electrothermal, Piezoelectric and Electrostatic.	
3.3	Micro Actuation tools: Micro Grippers, Micro Gears, Micro Motors, Micro Valves, Micro Pumps.	
4	MEMS Fabrication Processes	09
4.1	Understanding MEMS Processes & Process parameters for: Cleaning, Growth & Deposition, Ion Implantation & Diffusion, Annealing.	
4.2	Lithography: X-Ray Lithography, Photolithography, PVD, CVD, Wet etching, Dry etching, Plasma etching, DRIE, Etch Stop Techniques, Die, Wire & Wafer Bonding, Dicing, Packaging.	
5	MEMS Devices	09
5.1	Construction and working and applications of basic Cantilever structure, Micro heaters, Accelerometers, Pressure Sensor, Micromirrors in DMD, Inkjet printer, Steps involved in fabrication of above devices.	
6	MEMS Reliability	03
6.1	Reliability and various failure mechanisms for MEMS devices.	
6.2	Reliability curve.

NECPE363	Principles of Control System (Theory)	20	20	60	---	---	100

Course Prerequisite: Fundamentals of Engineering Mathematics-1 (NBS11), Fundamentals of Engineering Mathematics-2 (NBS21).

Course Objectives:

- 1 To develop the understanding of fundamental principles of control systems.
- 2 To disseminate the basic methods for time-domain and frequency-domain analysis of control systems.
- 3 To develop the concept of stability and its assessment for linear-time-invariant systems.
- 4 To introduce the basics of controllers.
- 5 To introduce the concepts of state space analysis.

Course Outcomes:

After successful completion of the course students will be able to:

- 1 Derive the mathematical models of physical systems.
- 2 Sketch various plots in time and frequency domain and analyse the system using the plots.
- 3 Evaluate the stability of control systems in the time domain.
- 4 Sketch various plots in the frequency domain and evaluate the stability of control systems in the frequency domain.
- 5 Understand and identify various types of controllers for a given system.
- 6 Analyse the control systems using state-space methods.

PRINCIPLES OF CONTROL SYSTEMS (THEORY)

Module	Contents	Hrs
1	Introduction to the Control Systems	06
1.1	Various Classification of Control System, Closed Loop Control Versus Open Loop Control, Feedback Characteristics: Types of feedback.	
1.2	Mathematical model of physical systems, transfer function.	
1.3	Block diagram and Signal Flow Graph (SFG) representation of control systems; Block diagram reductions; Mason's gain formula.	
2	Time response analysis	07
2.1	Standard test signals: Time response of 1st. order systems to unit step and unit ramp inputs. Time response of second order systems to unit step input. Time response specifications for second order system	
2.2	Application of initial and final value theorem; Steady state error and Error constants of different types of control systems	
3	Stability analysis in time domain	07
3.1	Concepts of stability: Necessary conditions of stability, Hurwitz stability criterion, Routh stability criterion, application of Routh stability criterion to linear feedback systems, Relative stability Analysis.	
3.2	Root locus techniques: Root locus concepts, rules for construction of root loci, determination of roots from root locus.	
4	Frequency Response Analysis	07
4.1	Introduction to frequency response; Polar plots, Bode plots, determination of stability from Bode plots, Performance specifications in frequency domain.	
4.2	Nyquist stability criterion, application of Nyquist stability criterion to linear feedback systems.	
5	Introduction to Controllers	05
5.1	Controllers: Introduction, Proportional, derivative and integral control actions, PD, PI and PID controllers and their applications to feedback control systems.	
5.2	Zeigler- Nichols method of tuning PID controllers for known dynamic models of the plant.	
6	State-space Analysis	04
6.1	Concept of state variables; State-space model; Canonical forms.	
6.2	Solution of state-space equation; Eigen-values and eigenvectors; Stability in state-space.	
6.3	Concept of controllability and observability.

7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

End Semester Theory Examination:	
1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

PRINCIPLES OF CONTROL SYSTEMS (LAB)

Course Code	Course Name	Teaching Scheme (Teaching Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut	Total
NECPE3L63	Principles of Control Systems (Lab)	---	02	---	---	01	---	01

Course Code	Course Name	Examination Scheme					
		Theory			Term Work	Practical & Oral	Total
		Internal Assessment		End Sem Exam			
		Mid-Term Test	Continuous Assessment				
NECPE 3L63	Principles of Control Systems (Lab)	---	---	---	25	25	50

Lab Outcomes:

After successful completion of the lab course students will be able to:

1	Analyze a control system in time and frequency domain.
2	Design a performance specification-based controller in time and frequency domain.
3	Develop and tune PID controllers for a given control system.
4	Evaluate controllability and observability of a control system.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Suggested Experiments: Students are required to complete at least 10 experiments.	
Sr.No.	Name of the Experiments
1	To perform the time response of a first-order and second-order system to standard input signals.
2	To perform the frequency response of a second-order system to standard input signals
3	To solve a differential equation model using simulation software.
4	To perform the steady-state errors for type-0, 1 and 2 systems
5	To perform stability analysis of several control systems using Nyquist plots.
6	To perform controllability and observability of control systems.
7	To analyze the frequency response of first- and second-order systems using Bode plots
8	To introduce the P/PI/PD/PID controller and its tuning.
9	To plot the root locus of a given open-loop transfer function and analyze the movement of system poles with varying gain.
10	Model systems in state space form and evaluate responses.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Term-Work:	
1	Term work should consist of 10 experiments.
2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	Total 25 Marks (Experiments: 15-marks, Term work Assessment: 10-marks)

NECMM 64	IIoT & Industry 4.0 (Theory)	20	20	60	---	---	100

Course Prerequisite: Web Technology (NOE401), Internet of Things (MDM1).

Course Objectives:

1	To learn and understand the importance of IoT in Industrial applications.
2	To understand how IoT has become a game changer in the new economy where the customers are looking for integrated value.
3	To apply the IoT concepts in building solutions to Industrial problems.
4	To learn and understand the tools and techniques that enable IoT solutions and Security aspects.

Course Outcomes:

After successful completion of the course students will be able to:

1	Discover key IIoT concepts including identification, sensors, localization, wireless protocols, data storage and security
2	Explore IoT technologies, architectures, standards and regulation
3	Apply IoT Protocols for Industrial automation/applications
4	Explain the need of IoT in Industrial environment & Security aspects of IoT
5	Explain the new concepts for data logging and analytics
6	Understand various application of IIoT.

IIOT & INDUSTRY 4.0 (THEORY)

Module	Contents	Hrs
1	Introduction & Architecture	03
1.1	What is IIoT and the Connected world?	
1.2	SCADA Vs. IoT	
1.3	Architecture of IIoT	
1.4	IoT node, Challenges of IIoT	
2	IIoT Components	05
2.1	Fundamentals of Control System: Introduction, Components, Closed loop & Open loop system.	
2.2	Sensors and Interfacing: Introduction to Sensors, Classification, Role of Sensors in IIoT, Various types of Sensors, Special requirements for IIoT sensors.	
2.3	Role of Actuators, Types of Actuators.	
2.4	Hardwire the sensors with different protocols such as HART, MODBUS-Serial & Parallel, Ethernet, BACnet, Current, M2M etc..	
3	Implementation and Deployment Challenges in Industrial IoT	06
3.1	Interoperability and Compatibility: Challenges in achieving seamless interoperability, Standardization issues across platforms, API integration and communication protocols	
3.2	Security Concerns: Common security vulnerabilities, Threat detection and mitigation strategies, Secure authentication and access controls	
3.3	Cybersecurity Risks: Emerging threats in the digital landscape, Role of encryption and secure data transmission, Risk assessment frameworks	
3.4	Data Privacy: Compliance with data protection regulations (e.g., GDPR, PDPB), Data anonymization and protection techniques, Ethical concerns in data handling	
3.5	System Scalability: Vertical vs. horizontal scaling strategies, Cloud vs. on premise scalability considerations, Resource optimization techniques	
3.6	Legacy Systems Integration: Challenges in modernizing legacy systems, Hybrid approaches for smooth transition, Cost vs. benefit analysis of upgrading vs. replacing.	
4	Communication Protocols	04
4.1	Importance of using MODBUS in IIOT Applications.	
4.2	MQTT vs. MQTTS .	
4.3	Cloud / Server architectural requirements for IIOT Applications.	
5	Control & Supervisory Level of Automation	04
5.1	Programmable logic controller (PLC)	

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

5.2	Control signal introduction, Digital I/O, Analog I/O, 4-20mA systems	
5.3	Supervisory Control & Data Acquisition (SCADA)	
5.4	Need of Human machine Interface (HMI) in Automation	
5.5	Basics of Enterprise Resource Planning (ERP) System & Manufacturing Execution System (MES)	
6	Applications of IIOT	04
6.1	Case study of Chemical Tank Level Monitoring application through HMI	
6.2	Case study on IIOT cloud integration with Microsoft Azure, AWS & other cloud services like Ubidots or Thingspeak,	
6.3	Case study on AWS Industrial IoT Predictive Maintenance	
Total		26

Internal Assessment:	
1	Assessment consists of one Mid Term Test of 20 marks and Continuous Assessment of 20 marks.
2	Mid Term test is to be conducted when approx. 50% syllabus is completed.
3	Duration of the midterm test shall be one hour.

Continuous Assessment:		
Continuous Assessment is of 20 marks . The rubrics for assessment will be considered on approval by the subject teachers. The rubrics can be any 2 or max 4 of the following:		
Sr. No	Rubrics	Marks
1	Certificate course for 4 weeks or more: NPTEL/ Coursera/ Udemy/any MOOC	10 marks
2	Wins in the event/competition/hackathon pertaining to the course.	10 marks
3	Content beyond syllabus presentation	10 marks
4	Creating Proof of concept	10 marks
5	Mini Project / Extra Experiments/ Virtual Lab	10 marks
6	GATE Based Assignment test/Tutorials etc	10 marks
7	Participation in event/workshop/talk/competition followed by a small report and certificate of participation relevant to the subject	05 marks
8	Multiple Choice Questions (Quiz)	05 marks
9	Literature review of papers/journals.	05 marks

End Semester Theory Examination:	
1	Question paper will be of 60 marks.
2	Question paper will have a total of five questions.
3	All questions have equal weightage and carry 20 marks each.
4	Any three questions out of five needs to be solved.

ASIC FLOW DESIGN (LAB)

Course Code	Course Name	Teaching Scheme (Teaching Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tut	Total
NECVS 61	ASIC Flow Design (Lab)	---	02	---	---	01	---	01

Course Code	Course Name	Examination Scheme					
		Theory			Term Work	Practical & Oral	Total
		Internal Assessment		End Sem Exam			
		Mid-Term Test	Continuous Assessment				
NECV S 61	ASIC Flow Design (Lab)	---	---	---	25	25	50

Course Prerequisites: Basic Course on Digital Circuits (typically taught in the first/second year of UG Program)

Lab Objectives:

- 1 Familiarize students with each stage of the ASIC/SoC physical design flow.
- 2 Teach the use of industry-standard EDA tools for synthesis, floor planning, placement, clock tree synthesis (CTS), and routing.
- 3 Emphasize timing, power, and area optimization techniques.
- 4 Develop problem-solving skills related to practical physical design challenges and design rule compliance.

Lab Outcomes:

After successful completion of the lab course students will be able to:

- 1 Understand the RTL-to-GDSII flow in modern digital IC design and explain the purpose of each stage in the VLSI backend process.
- 2 Perform synthesis from RTL to gate-level netlist using synthesis tools, optimizing for area, power, and performance.
- 3 Execute floorplanning and placement while understanding power planning, pin assignment, and congestion issues.

VIVEKANAND EDUCATION SOCIETY'S

Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

4	Implement Clock Tree Synthesis (CTS) and optimize timing parameters such as skew and latency.
5	Carry out routing and physical verification including DRC, LVS, and antenna checks.
6	Apply industry-standard tools (like Cadence, Synopsys, or Siemens EDA) to complete a physical design project from RTL to GDSII.

Suggested Experiments:	
Sr.No.	Name of the Experiments
1	Overview of Digital ASIC Design Flow, Introduction to LINUX.
2	RTL Coding in Verilog, Simulation.
3	Test Bench Design , Verification and Testing.
4	RTL Synthesis, Introduction to TCL, TCL Scripting for synthesis.
5	Start of Physical Design: Import, Floorplan, IO fillers, and Power plan.
6	Logical Equivalence Checking , post synthesis simulations.
7	Placement, Clock Tree Synthesis and STA.
8	Routing, std. cell fillers, Block level DRC, Dummy Fill, Chip level DRC, Antenna DRC and LVS etc ECO post route.
9	Post Route netlist simulations, Power Analysis.
10	Export GDS, Miniproject Specification.
11	Miniproject Implementation.

Note: Suggested List of Experiments is indicative. However, flexibilities lie with individual course instructor to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that, the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

NECCP61	Capstone Project – I	---	---	---	50	50	100

Course Objectives:

1	To acquaint with the process of identifying the needs and converting it into the problem.
2	To familiarize the process of solving the problem in a group.
3	To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4	To inculcate the process of self-learning and research.

Course Outcomes:

After successful completion of the course students will be able to:

1	Identify problems based on societal /research needs.
2	Apply knowledge and skill to solve societal problems in a group.
3	Develop interpersonal skills to work as member of a group or leader.
4	Draw the proper inferences from available results through theoretical/experimental/simulations.
5	Analyze the impact of solutions in societal and environmental context for sustainable development.
6	Use standard norms of engineering practices.
7	Excel in written and oral communication.
8	Demonstrate capabilities of self-learning in a group, which leads to life-long learning.
9	Demonstrate project management principles during project work

VIVEKANAND EDUCATION SOCIETY'S

Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Guidelines for Project	
1	Students should form groups with minimum 2(two) and not more than 4 (four)
2	Students should do survey and identify needs, which shall be converted into problem statement for major project in consultation with faculty supervisor/head of department/internal committee of faculties.
3	Students shall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of the project.

Log book	
1	A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
2	Faculty supervisor may give inputs to students during major project activity; however, focus shall be on self-learning.
3	Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
4	Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
5	The solution to be validated with proper justification and report to be compiled in standard format.
6	With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Projects.

Guidelines for Assessment of the Project-I:

Term Work

1	The review/ progress monitoring committee shall be constituted by head of departments. The progress of project to be evaluated on continuous basis, minimum two reviews in the semester.
2	In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Distribution of Term work marks for both semesters shall be as below;

1	In VI semester entire theoretical solution shall be ready, including components/system selection and cost analysis.
2	Two reviews will be conducted based on the presentation given by the student group.
3	First shall be for finalization of problem
4	Second shall be on finalization of proposed solution of problem.

Assessment criteria of Project-I

Project - I shall be assessed based on following criteria:

1	Quality of survey/ need identification.
2	Clarity of Problem definition based on need.
3	Innovativeness in solutions
4	Feasibility of proposed problem solutions and selection of best solution
5	Cost effectiveness
6	Societal impact
7	Innovativeness

Guidelines for Assessment of Project-I Practical/Oral Examination:

Report should be prepared as per the guidelines issued by the department.

Project-I shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organizations, having experience of more than five years approved by head of the Institute.

Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

VIVEKANAND EDUCATION SOCIETY'S Institute of Technology

(An Autonomous Institute Affiliated to University of Mumbai, Approved by A.I.C.T.E & Recognized by Govt. of Maharashtra)

Department of Electronics and Computer Science

Project-I shall be assessed based on following points;

1	Quality of problem and Clarity
2	Innovativeness in solutions
3	Cost effectiveness and Societal impact
4	Full functioning of working model as per stated requirements
5	Effective use of diversified skill-set
6	Effective use of standard engineering practices & norms
7	Contribution of an individual's as a member or Leader
8	Clarity in written and oral communication
